

# Regulatory Reporting Hub

on Fidectus Global Energy Network (GEN)

## Unify and control all your REMIT and EMIR reporting processes

Increase automation, reduce complexity, and stay up to date with regulatory reporting requirements like REMIT (EU & Switzerland) and EMIR REFIT (EU & UK). Fidectus Regulatory Reporting Hub makes regulatory reporting easy, secure, efficient, and compliant, providing full visibility and control across multiple jurisdictions within a single unified platform.

Fidectus is a Registered Reporting Mechanism (RRM) for reporting OTC and OMP trading data. By using our Regulatory Reporting Hub, you can create, process, monitor, and reconcile all your regulatory reporting transactions and lifecycles in one solution, across multiple repositories such as ACER and ElCom for REMIT, and REGIS-TR for EMIR and UK EMIR. Easily delegate and download transactions, benefit from automated mirror reporting, and leverage white-labelling features. This solution saves time, minimises errors and risks, and reduces costs. Regulatory Reporting Hub lowers manual intervention, ensuring accurate, compliant, and resilient workflows.

## The challenge

- Energy trading organisations are facing increasingly stringent regulatory reporting requirements for their trading activities.
- The growing number of regulations, systems, formats, and providers adds complexity to managing regulatory compliance.
- An expanding chain of delegations makes it challenging to maintain regulatory accountability for market participants.
- Energy trading organisations often rely on traditional processes for monitoring, creating, processing, and reconciling regulatory reports.
- Traditional solutions may struggle to offer a high service level while keeping costs competitive for direct market access (DMA) customers.

**A MODEL THAT SUITS YOUR NEEDS**

Regardless of your delegation model, transaction volume, need for an all-in-one solution, white-labelling, or a lean technical reporting mechanism, Regulatory Reporting Hub offers flexibility and configurability to meet your needs.

**TOUCHLESS REGULATORY REPORTING**

Enhance your service offering by providing your regulatory reporting team and your customers with our ready-to-use, white-labelled cloud features, and intuitive web-based interface.

**INCREASED CONTROL AND INSIGHTS**

You maintain full control and ownership of your reporting data, gaining valuable insights regardless of the delegation chain. Even handling the reporting yourself becomes easy and efficient.

**ELEVATED SERVICE LEVEL**

Easily report on behalf of your counterparties, as well as third- and fourth-party businesses. Manually report transactions, automatically generate UTIs, and manage transaction lifecycles through an intuitive web interface.

**INCREASED EFFICIENCY**

Streamline your workflow by eliminating manual tasks like downloading, emailing, reconciling, and archiving Excel sheets. Automate regulatory reporting, allowing you to focus on the corner cases. Save time and costs, reduce manual effort, and gain greater visibility with our Regulatory Reporting Hub.

## Get started

Minimise regulatory risk and take advantage of a range of modern, ready-to-use integration options with a quick return on investment. Alternatively, you can enjoy the benefits of the web application without the need for any integration.
